

Submission via online portal:

I note that under 50 Other specified matters - other service types that there are only 2 specialist aged care programs listed.

CHSP should also be included as providers undertake service specific assessments, goal directed care planning, service reviews and monitoring of change in circumstances/exacerbation of care. There are clients with increased complexity of care in CHP that should be able to access care management services.

I note that CHSP providers currently undertake this work under the wellness and reablement approach. In readiness for the eventual transition of CHSP to Support at Home (no earlier than July 2027) this work should be recognized under care management to ensure policy alignment..
